ANEMIA TESTING:

(not limited to)

CBC (COMPLETE BLOOD COUNT):

- ♦ The CBC measures many components of your blood. The test checks your hemoglobin and hematocrit (hee-MAT-oh-crit) levels. Hemoglobin is the iron-rich protein in red blood cells that carries oxygen to the body.

FERRITIN PANEL:

- ♦ Ferritin/ Iron/ transferrin/ TIBC (Total Iron Binding Capacity).

VITAMIN B12 & FOLATE (FOLIC ACID):

- ♦ Diagnose: Pernicious anemia (type of anemia).

The term “anemia” usually refers to a condition in which the blood has a lower than normal number of red blood cells.

In pernicious anemia, the body can't make enough healthy red blood cells because it doesn't have enough vitamin B12.
